

SUBJECT:

3M Security Window Film Helps Prevent Unwanted Entry In Schools

SECURITY

Dear Educational & Facilities Staff:
 After the horrible tragedy that took place in Newtown, school districts are being required to carefully review the security strategy within their schools. Most unfortunate tragedies that take place within our schools happen because the person committing the crime simply breaks the glass and enters the facility.

- **3M** Safety and Security Window Film reduces the threat of crimes from happening to the schools within your district.
- **3M** Security Film is designed to absorb blunt impact and explosive force greatly reducing the risk of glass failure and unwanted entry. The window remains in place even after taking repeated and severe impact preventing dangerous projectile glass.

- **3M** Security Film is an affordable way to provide the highest level of protection keeping your students and staff safe from danger.
- **3M** Security Films are 100% optically clear and are also available in a "tinted" shade to meet your school's privacy needs.
- **3M** Security Films are Category 3 Hurricane and GSA level 3 bomb blast approved.
